Exercise 2: **To construct a cpp program for printing employee details using class**

```cpp
#include<iostream>

using namespace std;

class employee

{

    public:

        void first()

        {

                int n,a[50];

                string b[50];

                cout<<"Enter the numer of employee:";

                cin>>n;

                cout<<"Enter the name and code:"<<endl;

                for(int i=0;i<n;i++)

                {

                        cout<<"Enter name:";

                        cin>>b[i];

                        cout<<"Enter code:";

                        cin>>a[i];

                }

        cout<<"The entered details are as follows:"<<endl;

        for(int j=0;j<n;j++)

        {

                cout<<"The name:"<<b[j]<<endl;

                cout<<"The code:"<<a[j]<<endl;

        }        }

};

int main()

{

        employee e1;
```

```
        e1.first();
}
```

OUTPUT:

Enter the numer of employee:2

Enter the name and code:

Enter name:EEE

Enter code:13

Enter name:DDD

Enter code:33

The entered details are as follows:

The name:EEE

The code:13

The name:DDD

The code:33
